Application No. 10/536,986 Amendment dated March 20, 2008 Reply to Office Action of September 21, 2007

AMENDMENTS TO THE CLAIMS

- 1. (Currently amended) A process for producing a polyether polymer composition, characterized in that at least one kind of agent selected from an antioxidant which is insoluble in an organic solvent and a stabilizer which is soluble in the organic solvent is incorporated are incorporated in a slurry comprising the organic solvent and a polyether polymer dispersed therein; and then, the organic solvent is removed from the slurry.
- 2. (Original) The process for producing a polyether polymer composition according to claim 1, wherein a solution of an antioxidant is incorporated in the slurry to prepare a slurry having the antioxidant dispersed therein.
- 3. (Original) The process for producing a polyether polymer composition according to claim 1, wherein the stabilizer is at least one kind of compound selected from the group consisting of cyclic amidine salts, hindered phenol compounds, phosphorous acid ester compounds, and fatty acids having at least 5 carbon atoms.
- 4. (Previously presented) The process for producing a polyether polymer composition according to claim 1, wherein the organic solvent in the slurry is a chain-like saturated hydrocarbon.
- 5. (Currently amended) A polyether polymer composition, characterized by obtainable by a process wherein at least one kind of agent selected from prepared in a process wherein an antioxidant which is insoluble in an organic solvent and a stabilizer which is soluble in the organic solvent is incorporated are incorporated in a slurry comprising the organic solvent and a polyether polymer dispersed therein; and then, the organic solvent is removed from the slurry.
- 6. (Currently amended) A polyether polymer composition comprising a polyether polymer particle, and at least one kind of agent selected from an antioxidant which is insoluble in an organic solvent incapable of dissolving the polyether polymer particle therein, and a stabilizer

plication No. 10/536,986 Docket No.: 1600-0161PUS1

which is soluble in the organic solvent, characterized by satisfying at least one of the following three requirements:

- (1) at least 50% by weight of the total amount of the antioxidant in the composition is deposited on the surface of the polyether polymer particle,
 - (2) the polyether polymer has a gel content of not larger than 5% by weight, and
- (3) at least 50% by weight of the total amount of the stabilizer in the composition exists within the polyether polymer particle.
- 7. (Currently amended) The polyether polymer composition according to claim 6, which is obtainable by a process wherein at least one kind of agent selected from prepared in a process wherein an antioxidant which is insoluble in an organic solvent and a stabilizer which is soluble in the organic solvent is incorporated are incorporated in a slurry comprising the organic solvent and a polyether polymer dispersed therein; and then, the organic solvent is removed from the slurry.
- 8. (Previously presented) The polyether polymer composition according to claim 5, wherein the stabilizer is at least one kind of compound selected from the group consisting of cyclic amidine salts, hindered phenol compounds, phosphorous acid ester compounds, and fatty acids having at least 5 carbon atoms.

9. (Canceled)

10. (Previously presented) The polyether polymer composition according to claim 6, wherein the stabilizer is at least one kind of compound selected from the group consisting of cyclic amidine salts, hindered phenol compounds, phosphorous acid ester compounds, and fatty acids having at least 5 carbon atoms.

Application No. 10/536,986 Amendment dated March 20, 2008

Reply to Office Action of September 21, 2007

11. (Previously presented) A solid electrolyte film comprised of the polyether polymer composition as described in claim 5, and an electrolyte salt compound which is soluble in the polyether polymer composition.

12. (Previously presented) A solid electrolyte film comprised of the polyether polymer composition as described in claim 6, and an electrolyte salt compound which is soluble in the polyether polymer composition.
